akm-rakinuzzaman

Summary

Software Engineer with ∼2.5 years building production SaaS end to end: TypeScript/React front ends over C#/.NET and Python services, deployed on AWS with Docker and Kubernetes. Took one product in the suite from an empty repository to production, including its Tesseract OCR pipeline. Strong on system design, identity and security, SQL performance, and production debugging; hands-on with cross-platform mobile (Flutter), data pipelines, and LLM/RAG and coding-agent tooling.

Experience

Cefalo

Associate Software Engineer II — Jan 2026 – Present
Associate Software Engineer I — Nov 2024 – Jan 2026

- **Plorea Horeca** *(Plorea, Norway)* — multi-tenant POS, ERP, and inventory SaaS suite serving 50+ hospitality businesses, with cloud-based reporting, payments, and third-party integrations. Built with C#, ASP.NET Core/Framework, TypeScript, React/Next.js, Vue.js, EF Core, SQL Server, OpenIddict, and IIS.
- Built **StockControl**, an inventory application in the suite, **from scratch** — a React/Next.js + TypeScript frontend on a .NET REST backend — covering stock counting (inventory management), supplier delivery intake, and inter-store replenishment. Owned it end to end from an empty repository to production.
- Built StockControl's **delivery-note scanning with Tesseract OCR**, which extracts the data off supplier delivery notes automatically so staff no longer key receipts in by hand.
- Delivered 50+ features across backend services and web clients and cut page-load times ∼60%; led authentication and authorization with OpenID Connect and OpenIddict.
- Diagnosed a report timeout as an $O(n^2)$ loop in C# (not SQL) via SQL Server DMV analysis, then rewrote the query path: a report that never finished in 20 min now runs in ∼15 s, with related queries up to ∼10× faster.
- Resolved ∼15 production incidents via logging and monitoring, and built a shared configuration system that cut configuration issues 5×.
- Work async with an overseas product team, delivering into a live product owned in another timezone.

Datavvy — *Junior Software Developer* — Jul 2024 – Oct 2024

- Built 3 Python data pipelines feeding ∼6 Apache Superset and Dremio dashboards for analytics and reporting.
- Worked with AWS services (EC2, S3, EKS/Kubernetes) and Docker for deployment and data processing.

Dashcam Heroz — *Software Engineering Intern* — Sept 2023 – Apr 2024

- Built Flask backend services for video processing and post management using FFmpeg, raising throughput to 1.5× more clips per hour.
- Developed Flutter mobile features for a cross-platform app, following agile development practices.
- Assisted with cloud deployment using AWS Lightsail, Lambda, and Firebase.

Beetles — *Cyber Security Trainee* — May 2023 – Jun 2023
Dhaka, Bangladesh

- Gained hands-on experience in offensive security using Metasploitable and Ghidra.
- Learned fundamentals of vulnerability analysis and reverse engineering.

Skills

Languages	C#, TypeScript, Python, Dart, Go, JavaScript (ES6), Java, C++, C
Backend & APIs	ASP.NET Core, ASP.NET Framework, Node.js/Express, Flask, REST APIs, OpenID Connect, OAuth 2.0
Frontend	React, Next.js, Vue.js, HTML, CSS
Mobile	Flutter, Dart (cross-platform iOS/Android)
Databases	Microsoft SQL Server, PostgreSQL, MySQL, MongoDB
Architecture	Microservices, Multi-tenancy, Background Jobs, Caching, MQTT, SignalR
Cloud & DevOps	AWS (EC2, S3, EKS), Azure, Docker, Kubernetes, IIS, Linux, CI/CD
AI & Data	Llama.cpp, RAG, Tesseract OCR, TensorFlow, MediaPipe, OpenCV, YOLO, Apache Superset, Dremio
Observability	Logging, Monitoring, Alerting, Incident Response, SQL Performance Profiling
Tools	Git, Postman, Jira, Claude Code, OpenCode (agentic development)

Education

Islamic University of Technology — *BSc. in Computer Science and Engineering* — Jan 2020 – May 2024
Gazipur, Bangladesh

Projects

Hearth AI (Python, React, llama.cpp, RAG) — Cross-platform local-LLM chat app: runs models on-device, answers questions over your own documents with RAG, and summarizes web search results.

minimal-auto-deployment (Go, Linux, systemd, Git) — Dependency-free (standard library only) deployment daemon: polls a git remote on a ticker, fast-forward pulls on divergence, runs a deploy script, and installs/uninstalls itself as a systemd service with journald logging.

Tokenometer (C#, .NET, WinForms) — Windows system-tray app showing live coding-agent usage (Claude, Cursor, and others).

News Stories (C#, ASP.NET, Vue.js, MVC) — Interactive frontend with a Repository-pattern backend and JWT / Microsoft Identity authentication and access control.

GesturePlay (Python, OpenCV, MediaPipe, TensorFlow) — Computer-vision system enabling media control through real-time hand gesture recognition.

Voyagers (ReactJS, Node.js, MySQL) — Travel-planning web app with map-based visualization and itinerary management.

ROS Autonomous Rover (ROS2, Embedded C) — Vision-assisted navigation and control for a 4WD robotic platform.

Certifications & Awards

- **SecureFlag** — Secure Coding in .NET (OWASP Top 10, Authentication, Backend & Frontend Security).
- **Champion** — IUT CodeRush 2023 (Hardware Project).
- **Top 5** — BUET CSE Fest 2023 Inter-University CTF.
- **Top 10** — European Rover Challenge 2022.
